Fuller Paper Palace One

1 Continental Drive, Tempe

This 500 sf office structure is constructed of 7 tons of waste paper mixed with other materials to provide a low-cost high-insulation prototype building material. The roof and walls are rated greater than R-30 with the roof approaching R-40, requiring little additional heating or cooling.

The facility, which cost about half what conventional construction costs, consumes considerably less electricity and includes monitoring devices for power usage and various structural elements of the building.

For more information on this and other Barry J. Fuller projects, visit: **www.livinginpaper.com**

DRIVING DIRECTIONS

From the intersection of Scottsdale Road and McDowell Road, travel south approx. 1/2 mile to Continental Drive/Roosevelt Street. Turn west onto Continental Drive and continue approximately 3/4 mile to the PeraClub. Enter the gated area and follow the signs to the Papercrete Demonstration site.
